USES

SOCOSAT E improves quality and provides the best result for bonding operations. Used successfully for the bonding of rear/front windows, but also for all other applications on bonding line (protective bodyside mouldings, logos...).

TECHNICAL CHARACTERISTICS

Wipe construction non-woven
 Wipe fabric 100% viscose
 Weight 50 gr/m²

BENEFITS OF PRESATURATED WIPES

The system of pre-saturated wipes provides **economical, environmental and safety advantages** for users compared to the method of using loose solvent with cloths. It helps to:

- Standardise cleaning and preparation operations,
- Improve quality and production line performance,
- Lower the quantity of product used,
- Reduce waste: for the same surface, the volume of wipes used is 5 to 10 times less than the volume of traditional cloths,
- Reduce VOCs (Volatile Organic Compounds) by 65% to 100% as targeted by the European Legislation
- Improve users' safety:
 - Drastically reduces the quantity of solvent released in the atmosphere
 - No risk of accidental spillage of drums full of flammable liquids (fire hazard)
 - Pre-saturated wipes are easy to use, handle and store compared to cloths and solvent

drums.
